

Rychiger AG
The world of IVD

Dive into our IVD portfolio

Assembly

Assembly and testing of products

Filling

Aseptic, molecular dx, immuno dx

Sealing and
closing

Heat, ultrasonic, impulse

Packaging
cartoning

Secondary packaging through
palletising

As a key supplier to healthcare and IVD kit manufacturers, we have been working hard to supply our customers with equipment for the manufacturing of a variety of immunodiagnostic and molecular diagnostics products. Our portfolio ranges from lab-scale machines to mass production equipment.

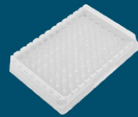

Molecular diagnostic
POCT devices

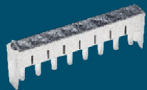

Reagent container for
immuno dx and
molecular dx

High barrier packaging

Microplates

PCR-Test Strips

Blood typing
cartridges

Our machine and service portfolio is designed to enable state-of-the-art cGMP production for a wide range of products.

Immunodiagnosics

- ELISA
- CLIA
- Agglutination chromatography

Molecular diagnostics

- Sample preparation
- Lysis
- PCR
- Detection
- Sample-in/result-out POCT devices
(single test and panel/ syndromic testing)

Clinical chemistry

- Reagents
- Calibrators
- Controls

Molecular Diagnostics

Our signature DNA-cleanable design gives you peace of mind when it comes to manufacturing molecular diagnostic devices. A variety of services such as qualification support or digital services will enable you to comply with GMP-requirements as well as to reduce the effort handling data to and from your production machines.

Immunology

Have you ever wished to combine a smaller footprint with higher throughput? Our machines are compact, versatile and can be adapted to different formats. Our expertise in liquid handling and dosing, especially sedimenting suspensions such as Sepharose gel and agar are our specialty.
